

Chris Loomis • *Safety Speaker*

TAKING SAFETY SERIOUSLY

Did you know that just a few key behavioral traits are represented in about 85% of accidents?

Fortunately, Chris Loomis of Loomis Safety Education will be discussing each of these in his safety presentation.

Drawing from over 20 years of plant safety experience, including a decade working at chemical major DuPont, Loomis will host an entertaining and enlightening presentation that examines the common mistakes that often lead to these incidents - and how best to avoid them.

The interactive session promises some lively and thought provoking discussion, mixed with plenty of case studies and real-world examples.

"It's all about attitude," he says. "If people believe they can have an accident free work environment, then it's possible."

"Almost all accidents are preventable. Developing a safer attitude is the first step in developing and creating a safety culture."

"If you have an accident, it affects the corporation as a whole. The simplest accidents are due to bad judgment and poor procedures," says Loomis. "And safety doesn't stop when you get off site either - you have to look at near misses at home and on the road, and learn as much as you can from them."

Complacency, distraction, and fatigue often play a major role in industrial accidents so developing a safety mindset and installing the right attitude in the workplace, and beyond, is essential, he says.

"As a business, if you want fewer lost work days, you need to realize that it will really benefit the company if you help your employees stay safe all of the time," insists Loomis.

"The most effective way of preventing accidents at work is by helping your employees avoid accidents at home and when they're on the road. In fact, by far the most dangerous time for most people is when they're going to and from work - and many have to take time off because of an incident they've had at home."

Responsibility should fall to everyone across an organization, he adds. Employees should adopt a shared safety ethic and take responsibility for their actions; they must lead by example and look out for one another.

**For a lasting impact on safety attitude,
your next presentation needs Chris Loomis.**

is an
Attitude**

Chris's Programs have the Best Retention Rate

With Chris's interactive, customized and very high wow factor safety presentation, the retention rate after eight weeks exceeds 84%.

Chris's safety presentations give you an incredible value and a great return on your investment. Through his safety presentation, your workers will learn how to develop a 24/7 safety attitude. This means less accidents at work, home, and on the road.

I. When safety is an attitude, nobody gets hurt!

The focus of this very powerful and interactive 45 to 90 minute presentation is for the participants to start to develop a 24/7 safety attitude. This is paradigm shift from other safety presentation; it addresses the 4 behaviors that are involved in 86% of all work-place accidents. Through group participation, we look at the behaviors that were responsible for the accidents being reviewed and how a change in behavior can prevent accidents from happening.

II. Disastrous Results with "No Safety Attitude"

A separate breakout session will see Loomis explore several plant disasters in detail, where he will highlight the importance of practicing a "safety attitude". He will take a deep dive into the issues that led to the incidents and outline the simple measures and procedures that could have avoided such an outcome.

Safety shouldn't be an afterthought, says Loomis. Safety should be an attitude.

III. Safety Communication for Managers and Supervisors.

The focus of this powerful and interactive 45 to 90 minute presentation is for managers and supervisors to learn techniques in safety communication that will prevent future accidents. These techniques were learned over 20 years of dealing with a variety of safety challenges at a multitude of plants.
